

DELTA® Product Overview

DELTA® VENTILATED RAINSCREEN

- **DELTA®-DRY:** This innovative Ventilated Rainscreen provides unrivaled drainage and drying capacity, a complete capillary break, and an effective barrier against solar driven moisture. The ideal protection behind adhered manufactured stone veneer, conventional stucco, and other absorptive claddings.
- **DELTA®-DRY STUCCO & STONE :** This innovative Ventilated Rainscreen provides unrivaled drainage and drying capacity, a complete capillary break, and an effective barrier against solar driven moisture. The factory-applied mortar screen makes it the ideal protection behind adhered manufactured stone veneer and conventional stucco.

10 year limited material warranty

DELTA®-PREMIUM MOISTURE MANAGEMENT FOR FOUNDATIONS

- **DELTA®-MS:** Foundation Dampproofing and Wall Waterproofing Membrane for Residential & Light Commercial Construction.
- **DELTA®-MS CLEAR:** Foundation Dampproofing and Wall Waterproofing Membrane for Insulated Concrete Form (ICF) foundations.
- **DELTA®-DRAIN:** Highly effective drainboard that adds protection to foundation walls by controlling the flow of below grade water. Eliminates hydrostatic pressure against below-grade structures by providing a drainage path for water.
- **DELTA®-FOOTING BARRIER:** Tough and pliable membrane that resists the capillary rise of water from footings into foundation walls. Helps to protect the basement from mold, deterioration of moisture sensitive materials and unhealthy living conditions.
- **DELTA®-COLDJOINT BARRIER:** A 40 mil (1 mm) rubberized asphalt self-adhering membrane. Ideal for the prevention of moisture penetration at concrete cold joints.
- **DELTA®-THENE 40/60 mil.:** Rubberized asphalt self-adhering membrane. Ideal for use as a waterproofing membrane behind DELTA®-DRAIN in a residential waterproofing application.
- **DELTA®-FL:** Vapor Barrier and separation layer for installation on concrete slabs to provide a warm and dry floor.

10 year limited material warranty

DELTA® Commercial Construction and Civil Engineering

- **DELTA®-DRAIN 2000:** This drainboard is designed to meet the requirements for light commercial applications and shallow depth foundations. It features high compressive strength, excellent drainage capacity and reliable long term performance.
- **DELTA®-DRAIN 6000:** Heavy-duty drainboard, ideally suited for applications in underground areas such as foundation walls, lagging or caisson walls, and retaining walls where high compressive strength and water flow rates are required.
- **DELTA®-DRAIN 6200:** A high-performance drainboard that features a tough polymeric sheet adhered to its back surface. The protection sheet prevents viscous flow and die cutting of soft liquid or sheet applied waterproofing products.
- **DELTA®-DRAIN 9000:** The ultimate high strength, high performance drainboard ideally suited for demanding horizontal drainage applications in plaza deck, pavement, and split slab construction where high flow rates and ultimate compressive strength are required.

10 year limited material warranty

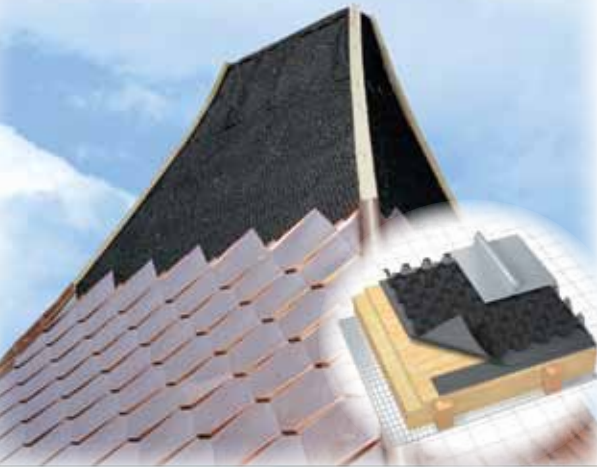

DELTA® Product Overview

DELTA® ROOF UNDERLAYMENTS

- **DELTA®-TRELA:** Vapor permeable underlayment combined with structured separation and drainage layer for ventilated and non-ventilated pitched roofs or facades with metal cladding.
- **DELTA®-VENT S:** Vapor permeable 3-layer roof underlayment for all roof claddings. Tough, waterproof, and wind resistant. Provides reliable protection against wind driven rain and snow.
- **DELTA®-FOXX:** The most vapor permeable roof underlayment on the market - ideal under slate, clay, and concrete tiles on ventilated or non-ventilated roofs.
- **DELTA®-MAXX TITAN:** Reflective, vapor permeable roof underlayment with integrated self-adhesive edge. Ideal for integrating a radiant barrier into clay or concrete tile roofs.

10 year limited material warranty

DELTA® WATER-RESISTIVE BARRIERS

- **DELTA®-FASSADE S:** The most UV-tolerant water-resistive barrier on the market. Specifically designed for use in open joint cladding systems.
- **DELTA®-VENT S:** The highly vapor permeable WRB and air barrier for energy efficient building enclosures. It remains watertight and air tight while staying water vapor permeable.
- **DELTA®-FOXX:** The most vapor permeable and technologically advanced Water-Resistive Barrier on the market.
- **DELTA®-MAXX:** The air-tight Water-resistive Barrier that can buffer excess moisture in its built-in reservoir layer. It protects the building enclosure from moisture problems even in extreme conditions.

10 year limited material warranty

DELTA® GARDEN ROOF SYSTEM

- **DELTA®-FLORAXX:** Provides high water retention capacity combined with outstanding drainage characteristics and is an ideal and sustainable component in garden roof designs.
- **DELTA®-BIOTOP:** A filter fabric designed for use with DELTA®-FLORAXX and DELTA®-ROOT BARRIER in the DELTA® GARDEN ROOF SYSTEM. DELTA®-BIOTOP helps hold the growing medium in place and prevent it from washing away and clogging the drainage capability of DELTA®-FLORAXX.
- **DELTA®-ROOT BARRIER:** Protects the primary waterproofing layer from construction traffic during the installation process and from penetration by aggressive plant roots. With DELTA®-FLORAXX and DELTA®-BIOTOP, it is part of the premium DELTA® GARDEN ROOF SYSTEM.
